**How to choose your awning?**  
Inaca offers a wide range of awnings. Each of them has different performance qualities to satisfy every caravanner's specific needs. Therefore, it is very important to choose an awning that suits your needs. Do not hesitate to ask your distributors for advice. Their professional assessment will help you with your choice.

**Which is the most suitable awning for your caravan?**  
When buying your awning, our distributors will need to know the Brand, Model, and Year of your caravan. If you are unsure about any of these facts, Inaca offers you a quick and efficient guide classifying the awning's size according to the perimeter of each caravan.

**How to measure the perimeter of your caravan?**  
With your caravan on flat ground, measure your awning rail from floor to floor as shown by the red line in the diagram. By measuring the distance from A to B, you can have the perimeter of your caravan.

**For instance:**  
If your caravan has a perimeter of 944 cms (Measurement from A to B), the appropriate awning for you is V-950.

**Some important suggestions:**  
Always pay special attention at measuring the perimeter of your caravan; The correct election of the size you require is a determinant factor for the proper erection of your awning.  
According to the different sizes the distribution of the front panel may vary. Pay attention at the diagrams in order to avoid misunderstandings.  
Never pack your awning when wet.  
Never clean your awning with products that may damage the materials.  
When you use your PVC awning for the first time under rainy conditions, it is possible that the seams may leak initially. The problem will disappear when the stitching has swollen into place over the following days use.
